3.1	Detail	

## 2X-5210 Electro chlorination

- This unit function is to generate hypochlorite from seawater. The hypochlorite is used for marine growth and bio fouling prevention in piping. Otherwise, line will be blocked.
- Hypochlorite is supplied to important unit such as fire water ring main, service water pump and fire water pump. Therefore, continuous injection of hypochlorite is very critical for plant.
- 2X-5210 Electro chlorination was selected to be implemented autonomous maintenance and detail step systems as below;

## 2X-5210 - PFD

### Targets to improve (KPI) AM manager model 2017

	○	○		number of LTIF does not exceed 0.6/MMhrs	○			○	
	○			Loss of primary containment rate does not exceed 0.17/MMhrs	○			○	
			●	2017 OPEX reduction by 10%		●	●		
Preventive maintenance program improvement by x%	Bad actor elimination by x%	Predictive analysis implementation by x%	Stock holding cost reduction by x%	<div><div>PMI Objectives</div><div>PBS/P Objectives</div><div>PBS Objectives</div><div>Targets to improve (KPI)</div></div>		Minimum concentration of Cl equivalent must be ≥ 0.2 ppm	cost of maintenance of the unit reduced by 10% comparing to 2016	maintenance man-hour of the unit reduced by 10% comparing to 2016	number of unit breakdown reduced by 10% comparing to 2016
	○	○		zero accident (TRIR for medical treatment)	○				
●	●	●		Zero unexpected shutdown	○			●	
			○	Complied with SPEND SMART campaign		●	●		

● Primary correlation  
○ Secondary correlation

### Step 1 : Initial Clean-up

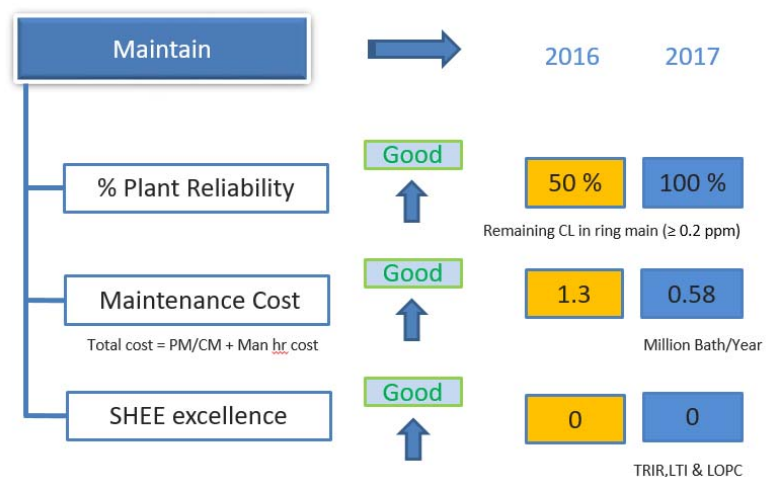

- 1.1 Perform cleaning
- 1.2 Inspection
- 1.3 Anomaly Classification
- 1.4 Resolve finding and Follow-up
- 1.5 Prepare temporary procedure
- 1.6 Self audit and manager audit before go to step 2

### Step 2: Eliminate tag find out inaccessible and source contaminate

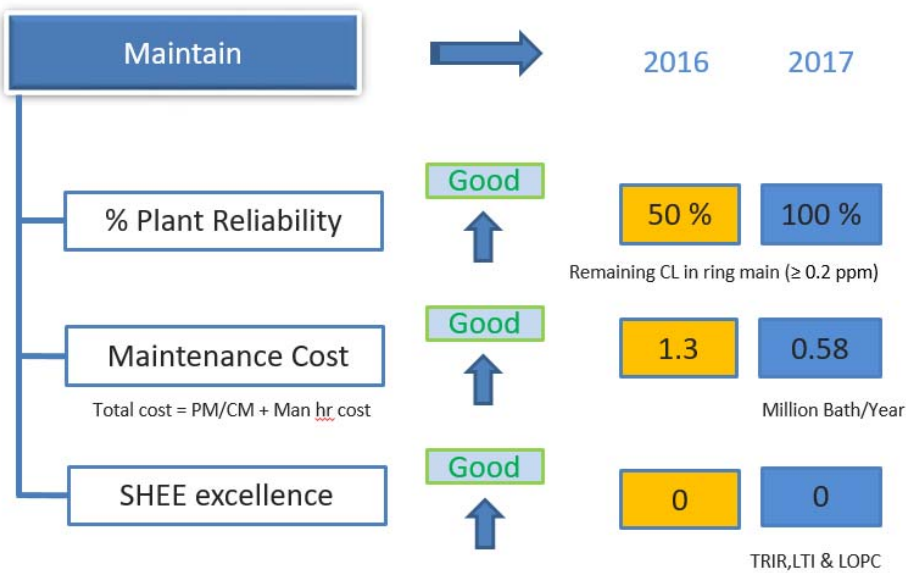

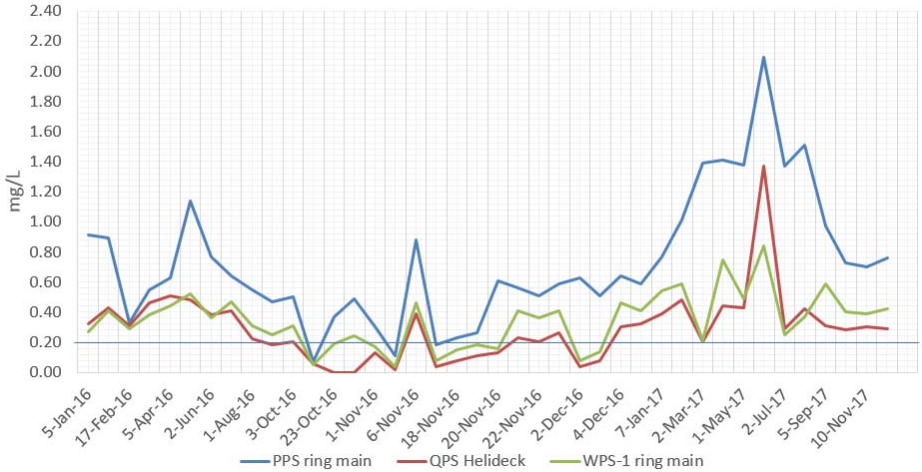

- 2.1 Identify inaccessible point and source of contaminate
- 2.2 Apply why-why analysis
- 2.3 Resolved finding or provide mitigation
- 2.4 Audit before continue to step 3

### Step 3: Tentative Standard for Cleaning, Oiling, Inspection and Visual Control

Result :

4	Best Practice Process / Procedures*	<p style="text-align: center;"><b>AM Step by Step</b></p> <p>Autonomous step</p> <ol style="list-style-type: none"> <li>1. Initial Cleaning, inspection</li> <li>2. Eliminate tag find out inaccessible and source contaminate</li> <li>3. Tentative Standard for Cleaning, oiling, inspection and visual control</li> <li>4. General Inspection</li> <li>5. Autonomous Inspection</li> <li>6. Standardization</li> </ol>
5.1	Operation Duration*	start date: 11/10/2015 end date : present
5.2	Lifetime of Project*	-10 years
6	Application*	<p>- Maintain implementation for 2X-5210 Electrochlorination package (Manager model) in 2018.</p> <p>- In year 2018, apply to others equipment as AM small group activities. Area of assignment is following.</p> <p><u>Group A</u> 2P-5201A, 2P-5030A, 2P-5040A, 2P-3450A ,2P-5031A</p> <p><u>Group B</u> 2P-5201B, 2P-5030B, 2P-5040B, 2P-3450B ,2P-5031B</p> <p><u>Group C</u> 2P-6201, 2P-5030C, 2P-5040C, 2P-5050 A/B</p> <p>- AM target of year 2018 is STEP-2 achievement within October 2018.</p>
7	Project Cost & Investment (Mil.Baht)*	No investment cost

8	Project Cost & Investment per year (Mil.Baht/ Yr)*	No investment cost												
9	Benefit*	<p>Result of KPI 2017</p>  <p>Target to improve (KPI) : Minimum concentration of Cl equivalent must be <math>\geq 0.2</math> ppm</p> <p>Chlorine content in water of Service ring main</p>  <p>Target to improve (KPI) : Total cost of maintenance &amp; maintenance man-hours of the unit reduced comparing to 2016</p> <table border="1" data-bbox="526 1825 1125 1960"> <thead> <tr> <th></th><th>2016</th><th>2017</th></tr> </thead> <tbody> <tr> <td>CM/PM Cost (THB)</td><td>251,001</td><td>181,354</td></tr> <tr> <td>Man-hr Cost (THB)</td><td>998,976</td><td>402,996</td></tr> <tr> <td>Total Cost (THB)</td><td>1,249,977</td><td>584,350</td></tr> </tbody> </table> 		2016	2017	CM/PM Cost (THB)	251,001	181,354	Man-hr Cost (THB)	998,976	402,996	Total Cost (THB)	1,249,977	584,350
